Onkar Shinde

onkarshinde.ai@gmail.com 9309313545 Pune, India onkarshinde77 onkarshinde77

Objective

I am an AI/ML developer with experience in deep learning, agentic AI, and computer vision, focused on building scalable, real-world intelligent systems.

Leadership & Experience

Competitive Programming and Mentorship Club Sep 2024

Commander

- Engaged in coding contests, hackathons, and workshops to strengthen problem-solving and algorithmic skills.
- Collaborated on coding projects, mentored peers, and contributed to building a supportive learning environment.

Education

D Y Patil College Of Engineering Akurdi, Pune

Bachelor of Engineering (B.E.) in Artificial Intelligence & Data Science — CGPA 8.34 *2023 – 2027*

Projects

Blog Writing Agent System | ***github***

- Built an autonomous multi-agent system using LangGraph that breaks a single user prompt into structured steps (planning, research, and writing) to generate high-quality blog posts with real-time web search integration and parallel agent execution.
- **Tech Stack:** Python, LangGraph, LangChain, Groq (LLaMA 3), Tavily API, Streamlit.

Face Mask Detection System Using OpenCV | ***github***

- Engineered a two-stage deep learning pipeline: Face detection and Mask classification using a fine-tuned VGG16 CNN model.
- Implemented transfer learning and model optimization techniques to achieve 95% detection accuracy and 98% classification accuracy for live camera, image, and video inputs.
- Built a scalable, containerized deployment using Docker following industry-level architectural standards.
- **Tech Stack:** Python, TensorFlow/Keras, OpenCV, CNN (VGG16), Flask, Docker.

Duplicate Question Pair | ***github***

- Developed a Duplicate Question Pair Detector using NLP and machine learning to predict if two questions have the same meaning, handling a dataset of 30,000+ question pairs. Achieving an F1-score of 0.84.
- Deployed a web application with FastAPI and Docker, implementing feature engineering, word embeddings, and efficient data processing for limited hardware environments.

WhatsApp Chat Analysis | ***github***

- Built a Django-based web application to analyze WhatsApp chats with features including Most Active User, Most Used Words, Emoji Analysis, Monthly/Weekly Activity Trends, and Timeline Visualizations.
- **Tech Stack:** Python, NumPy, Pandas, Matplotlib, Seaborn, Django, HTML, CSS, Render.

Technical Profile

Github Leetcode Docker My Blogs Kaggle

Skills

Languages & DB: Python,SQL,MYSQL,FAISS,Pinecone

AI/ML & Data Science: Machine Learning, Deep Learning, NLP, LLMs, Transformers, Generative AI,RAG, OpenCV, NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn

Frameworks & Tools: Django, Flask, FastAPI, Streamlit, LangChain, LangGraph, LangSmith, Hugging Face, HTML, CSS, TailwindCSS, Git, GitHub, Docker, Vercel, Render
